

Violin Custom Shoulder Rest Instructions

1. Tilt the support rod up into roughly the position it will be when in use, and tighten the clamp.
2. Slide support rod into the hole at the very back of the violin and clamp in place.
3. Place the rest onto your shoulder. Adjust both clamps as needed to position the violin at the height and angle that is most comfortable.
4. Bend the malleable aluminum top plate as desired with fingers and thumb as shown below. The shape should be adjusted so the rest is comfortable and stable on the shoulder and across the chest.
